Define Problem Statements (Customer Problem Statement Template)

The team used the Customer Problem Statement template to understand the perspective of **Alex**, a travel enthusiast who frequently visits different cities and needs a streamlined way to track local weather conditions and receive AI-driven activity suggestions based on current forecasts.

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Alex, a travel enthusiast who visits multiple cities	keep track of weather conditions for all the cities he cares about, in one secure place	has to re-search each city separately every time, with no saved, synced list	most weather apps offer no authenticated account to persist favorite locations across devices	disorganized and like he is starting over every time
PS-2	Alex, planning a day of outdoor activity in an unfamiliar city	decide what to wear and whether his plans are realistic	only gets raw temperature, humidity and wind numbers from typical weather apps	those apps display metrics without translating them into actionable advice	unsure and mildly anxious about being unprepared
PS-3	Alex, a mobile, tech-comfortable user	get a quick, natural-language summary instead of parsing numbers himself	existing tools stop at the data and leave interpretation entirely to him	there is no generative-AI layer connecting live weather data to plain-language guidance	frustrated at spending mental effort on something an assistant could do instantly
