Empathy Map

Persona: **Alex** – Travel Enthusiast / End User of AI WeatherWise.

SAYS "I keep forgetting which cities I already checked the weather for." "I just want to know if I need a jacket today, not a humidity percentage." "Why do I have to figure out what this weather even means for my plans?"	THINKS "There has to be a smarter way to track weather for the places I travel to." "I wish an app could just tell me what to do based on the forecast." "I don't want my saved cities lost if I switch devices."
PERSONA — Alex · Travel Enthusiast / Registered User	
DOES - Checks multiple weather websites/apps manually before every trip. - Notes favorite cities in a separate notes app since weather apps don't sync them. - Searches online for "what to wear in X°C weather" after checking the forecast.	FEELS - Frustrated by repetitive manual lookups across apps. - Overwhelmed by raw data with no context or guidance. - Relieved and confident when he gets clear, actionable advice.

This empathy map directly informed the AI WeatherWise feature set: secure saved-location management (addresses SAYS/DOES) and Gemini-generated natural-language summaries and recommendations (addresses THINKS/FEELS).
