

Problem-Solution Fit

Date	17 September 2026
Team ID	SWTID-2026-2825
Project Name	AI WeatherWise
Maximum Marks	5 Marks

Problem-Solution Fit Canvas

1. CUSTOMER SEGMENT(S) [CS] Frequent travellers and everyday planners who track weather for multiple cities (persona: Alex, travel enthusiast)	6. CUSTOMER LIMITATIONS [CL] Eg. Budget, Devices — relies on a phone with limited data; wants a quick answer, not raw numbers to interpret; not a meteorologist	5. AVAILABLE SOLUTIONS PROS & CONS [AS] Generic weather apps: widely available, real-time data (pro); no personalization, no saved-location sync, numbers only, no AI guidance (con)
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] Manually checking multiple weather sources (daily); no personalized activity/clothing guidance (daily); no secure cross-device city sync (recurring)	9. PROBLEM ROOT / CAUSE [RC] Existing weather apps focus purely on raw data delivery, not on authenticated personalization or decision support	7. BEHAVIOR + ITS INTENSITY [BE] Checks weather 2-3 times a day before travel decisions; intensity rises sharply while trip-planning
3. TRIGGERS TO ACT [TR] An upcoming trip to a new city; a sudden weather change; a daily routine check before commuting	10. YOUR SOLUTION [SL] AI WeatherWise: a secure Node.js/Express REST backend where users register, save favorite cities, fetch live OpenWeatherMap data, and get Gemini AI-generated natural-language summaries & recommendations — all behind JWT authentication	8. CHANNELS OF BEHAVIOR [CH] ONLINE – weather websites/apps, browser search OFFLINE – asking others, checking outside directly
4. EMOTIONS BEFORE / AFTER [EM] Before: uncertain and mildly anxious about being unprepared. After using AI WeatherWise: confident and reassured with clear, AI-backed, city-specific guidance.
