Project Name	AI WeatherWise
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of the implemented code and overall AI WeatherWise solution, submitted at the end of Sprint-2 (27 September 2026).

Solution Summary

Repository Link / URL	https://github.com/SafiyahArif/AI_Weather_TN_Skills
Programming Language(s)	JavaScript (Node.js)
Framework(s) Used	Express.js, Mongoose
Key Features Implemented	JWT authentication (register/login), favorite-location CRUD, real-time weather fetch (OpenWeatherMap), AI-generated summaries & recommendations (Google Gemini), resilient fallback mode, centralized error handling, request sanitization
Pending / Incomplete Features	Dedicated frontend client UI (out of scope – project is a backend/API service by design); rate-limiting middleware planned as a future enhancement (see Scalability & Future Plan)
Setup / Run Instructions	<pre>cd Backend npm install # create .env with PORT, MONGO_URI, JWT_SECRET, GEMINI_API_KEY npm start # or: npm run dev (nodemon) # test endpoints via Thunder Client / Postman using postman_collection.json</pre>

Fig. – Actual Backend/ project folder structure (VS Code Explorer).

Code Quality Checklist

S.No	Criteria	Status (Yes/No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments: All auth, location, weather and AI endpoints were verified locally via Thunder Client during Sprint-2 (22–27 September 2026); see Performance Testing for the recorded results and Project Documentation for request/response evidence.
