

Project Executable Files

Date	28 September 2026
Team ID	SWTID-2026-2825
Project Name	AI WeatherWise
Maximum Marks	3 Marks

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes – package.json & package-lock.json
4	Database schema / seed files (if applicable)	Yes – Mongoose schemas (User.js, Location.js)
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA – run locally for the grading window; .env-driven config is cloud-deploy-ready
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA – headless backend REST API, not a mobile/desktop app
8	Dockerfile / Containerization config (if applicable)	No – planned for a future release (see Scalability & Future Plan)
9	Test files and test results	Yes – postman_collection.json + Thunder Client evidence
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Backend/ project structure as committed to the repository.

```
Backend/  
├─ node_modules/  
├─ src/  
│   ├── config/  
│   │   └─ db.js  
│   ├── controllers/  
│   │   ├── aiController.js  
│   │   ├── authController.js  
│   │   ├── locationController.js  
│   │   └─ weatherController.js  
│   ├── middleware/  
│   │   └─ authMiddleware.js  
│   ├── models/  
│   │   ├── Location.js  
│   │   └─ User.js  
│   ├── routes/  
│   │   ├── aiRoutes.js  
│   │   ├── authRoutes.js  
│   │   ├── locationRoutes.js  
│   │   └─ weatherRoutes.js  
│   └─ services/  
│       ├── aiService.js  
│       └─ weatherService.js  
├─ app.js  
├─ server.js  
└─ .env
```

```
└─ .gitignore
└─ package.json
└─ package-lock.json
└─ postman_collection.json
└─ README.md
```

Step 3: Deployment / Access Details

Hosted / Deployed URL	Not deployed to the cloud for this cycle - run locally at <code>http://localhost:5000</code> (PORT from .env)
Login Credentials (Demo)	Demo/test account used during Thunder Client verification - name: Kelwin, email: Kelwin@gmail.com, password: Kelwin\$9012
Platform / Hosting Provider	Local Node.js runtime (cloud-ready via .env for providers such as Render or Railway)
Repository Link	https://github.com/SafiyahArif/AI_Weather_TN_Skills
Demo Video Link	https://drive.google.com/drive/folders/1tcfKmp5lu9m6SA3HBz6PuILOKpgHckX?usp=sharing

Step 4: Run Instructions

```
1. git clone https://github.com/SafiyahArif/AI_Weather_TN_Skills
2. cd Backend
3. npm install
4. Create a .env file in the project root:
   PORT=5000
   MONGO_URI=your_mongodb_connection_string
   JWT_SECRET=your_jwt_secret
   GEMINI_API_KEY=your_gemini_api_key
5. npm start (or: npm run dev, using nodemon)
6. Import postman_collection.json into Thunder Client / Postman
7. Call /api/auth/register, /api/auth/login, /api/location,
   /api/weather/:city and /api/ai/insights to exercise the API
```

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	No dedicated frontend UI - API-only backend	Test via Thunder Client / Postman using the provided postman_collection.json
2	Free-tier OpenWeatherMap / Gemini API rate limits may throttle heavy testing	Fallback mode returns a safe default response instead of failing
3	No Dockerfile yet	Planned for the Scalability & Future Plan phase
